Kind Attn: Mr. Prakash Chander

Sub.: CDM Project under UN framework convention on climate change (UNFCCC)

Dear Sir,

We have complete power house (installed capacity of 11500 KVA), comprises of total 07 Nos. DGs set (02 Nos. X 2000 KVA each + 05 Nos. X 1250 KVA each) and running as per production requirement. On a average daily HSD consumption in power house is around 20~21 KL

Recently we have installed 02 Nos. Fitch Fuel Catalyst in 2000 KVA DGs set and result are good and we are getting > 7 % saving.

After getting good performance of Fitch Fuel Catalyst, we are planning to install in other DGs set / Boiler also.

We will also like to mention that after installation of Fitch Fuel Catalyst there is sharp decrease in the emission.

Thanking you,

Yours Faithfully,

Sanjay Aggarwal
